Experienced Engineering Leader specializing in SRE & Software Engineering (10+ years).. Proven success in building and scaling high-performing SRE teams (3 years). Passionate about incident response optimization and cloud-native reliability.

Skills

Python | AWS | Splunk | Docker | Puppet | Ubuntu | Terraform | Kubernetes

Personal Development

Gap Year

Oct 2023 - Dec 2024

- Took a planned career break to prioritize personal growth and strengthen relationships with family and friends
- Performed renovations on home including painting, office organization, and landscaping projects
- Embarked on first-time travels to Europe visiting England and Norway
- Kept up to date with SRE and Engineering leadership developments through resources like Rands Leadership Slack, Developer Roadmaps (roadmap.sh), and coding exercises
- Energized and looking forward to returning to the workforce

Work Experience

Engineering Manager

Yelp

Oct 2020 - Sep 2023

- Created a team roadmap aligning deliverables with organizational goals on an annual basis
- Oversaw the onboarding process of all engineering teams to a modernized incident response platform
- Managed the lifecycle policy for operating systems across Yelp's infrastructure, ensuring software compatibility with in-support versions of Ubuntu and migrating away from outdated versions
- Recruited, managed, and developed a team of SREs in a remote-first environment spanning multiple time zones
- Supported the career growth of seven SREs with different experience levels, leading to 5 promotions

Site Reliability Engineer

Yelp

Apr 2015 - Oct 2020

- Participated in a follow-the-sun on-call rotation with fellow SREs, responding promptly to alerts and incidents concerning Yelp's infrastructure while enhancing processes for future on-call teams
- Supported the infrastructure of acquired companies, facilitating their transition to standard Yelp technologies like Kubernetes, Sensu, Jenkins, AWS EC2, ElastiCache, and Yelp's internal PaaS
- Collaborated with leadership as a tech lead to translate roadmap objectives into actionable projects for the team
- Guided team members as a tech lead, offering technical mentorship through regular 1:1 sessions and daily guidance

Software Engineer

PayPal

Feb 2011 - Feb 2015

- Supported applications and batch processes for PayPal Credit, ensuring proper functionality and monitoring
- Developed troubleshooting tools to address recurring failures in batch processes
- Researched customer issues, implemented fixes directly or collaborated with development teams for resolution
- Participated in 24x7 on-call rotation for responding to production alerts

Developer

Legg Mason

Jun 2008 – Feb 2011

- Supported Straight-Through Processing (STP) applications and processes for trade processing in capital markets and payment transactions
- Collaborated with infrastructure teams to establish internal and external networks for STP application integration
- Automated processes using Autosys, PERL, and Windows batch scripting languages
- Executed maintenance and upgrades on server-based software for STP-related processes

IT Support

St. Mark's High School

Jan 2006 – Jun 2008

- Delivered hardware and software support for 1750 students, faculty, and staff
- Managed installation, setup, and maintenance of OS X and Windows servers at the school
- Maintained functionality of all technology equipment within the building

Education

**B.S. in Computer and Information
Sciences**

University of Delaware

2002 – 2006
